PRODUCT STRATEGY / EXECUTIVE PDF

GO-TO-MARKET

How to launch with precision, convert efficiently, and scale with consistency.

Executive guide to structuring GTM for B2B and B2C digital products, connecting value proposition, segmentation, channels, pricing, onboarding, and metrics.

Includes an applied case study, a channel matrix, and a 90-day plan.

1. What GTM is - and why so many companies get it wrong

Go-to-Market is the system that connects value proposition, target segment, positioning, pricing, distribution, sales enablement, and early retention to turn a launch into repeatable revenue. In executive terms, GTM is the bridge between product and real demand capture.

The classic mistake is to confuse GTM with campaign execution. A campaign is only the visible layer. In practice, GTM is a decision architecture: who buys, why they buy, why they switch from the status quo, which channel brings them in, which message converts, which experience closes the sale, and which onboarding motion reduces early churn.

Signals of a poorly designed GTM

- ICP that is too generic: the team sells to everyone and learns from no one.
- Weak messaging: the product feels interesting, but not necessary.
- Wrong channel: high CAC, long cycle, and little qualified volume.
- Misaligned pricing: too high for perceived value or too low for sales complexity.
- Late metrics: the company watches only revenue, not the efficiency of the path to revenue.

Minimum structure of a professional GTM

Building block	Critical question	Expected output
ICP and segmentation	Who has acute pain, urgency, and buying power?	Prioritized list of segments and personas
Positioning	Why does this product beat the status quo?	Core message and differentiation
Offer and pricing	How do we capture value without blocking acquisition?	Packages, pricing anchors, and commercial policy
Channels	Where is qualified attention available at a viable cost?	Acquisition and distribution mix
Sales enablement	How do we reduce friction in closing?	Pitch, objection handling, proof, and playbooks
Onboarding	How do we accelerate time-to-value?	Activation sequence and early success
Measurement	What defines progress or retreat?	KPIs, targets, and iteration triggers

Executive readout: a strong GTM creates enough clarity to say no to segments, features, channels, and discounts that look helpful in the short term but destroy consistency in the medium term.

2. Fictional case: launching a financial automation SaaS (B2B)

Hypothetical product: a platform that automates financial reconciliation and collections for service SMBs. Objective: enter a niche with measurable pain, a ticket size that fits inside sales, and onboarding in up to 14 days.

Element	Definition
Primary ICP	Companies with 10 to 80 employees, annual revenue between BRL 2M and BRL 25M, and finance operations run in spreadsheets plus a partial ERP.
Dominant pain	Time lost in reconciliation, delayed collections, weak financial visibility, and high operational risk.
Positioning	"Close the month faster, with less rework and more cash-flow predictability."
Initial pricing	Monthly subscription base plan plus paid onboarding for lightweight implementation.
Operational moat	Vertical templates, integration into recurring routines, and clear economic proof within 30 days.

Baseline metrics from the commercial pilot

Metric	Before GTM adjustment	Post-GTM target
Lead -> meeting	6%	12%
Meeting -> proposal	38%	52%
Proposal -> close	18%	28%
Blended CAC	BRL 420	BRL 260
Payback	11 months	6 months
30-day activation	54%	78%
90-day churn	8.5%	4.0%

Operating thesis: before scaling media, the priority is to raise progression rates between funnel stages and reduce early churn. Scaling acquisition on top of a broken funnel is not growth; it is amplified waste.

3. Channels, acquisition, and funnel design

In a disciplined GTM, channel choice is not aesthetic - it is economic. The channel must combine qualified attention, predictability, acceptable cost, and the ability to generate fast learning.

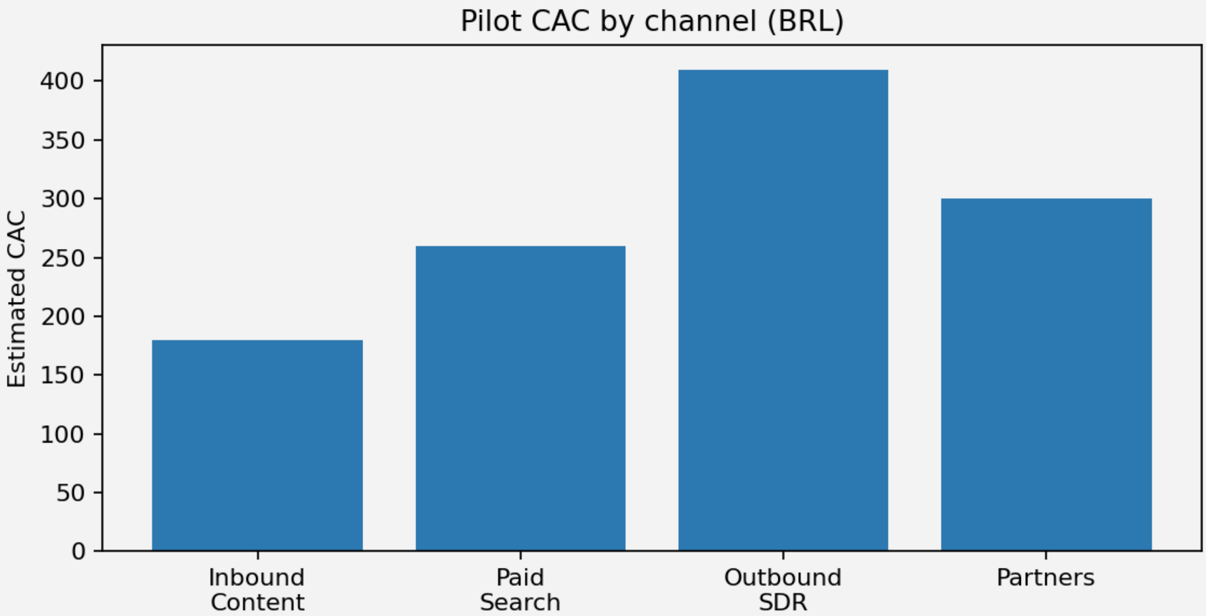

Chart read: inbound tends to be more efficient when pain is searchable and content is problem oriented. Outbound can accelerate learning in narrow niches, but it usually requires a sharper ICP and stricter scripting. When partnerships are curated well, they can deliver competitive CAC with borrowed trust.

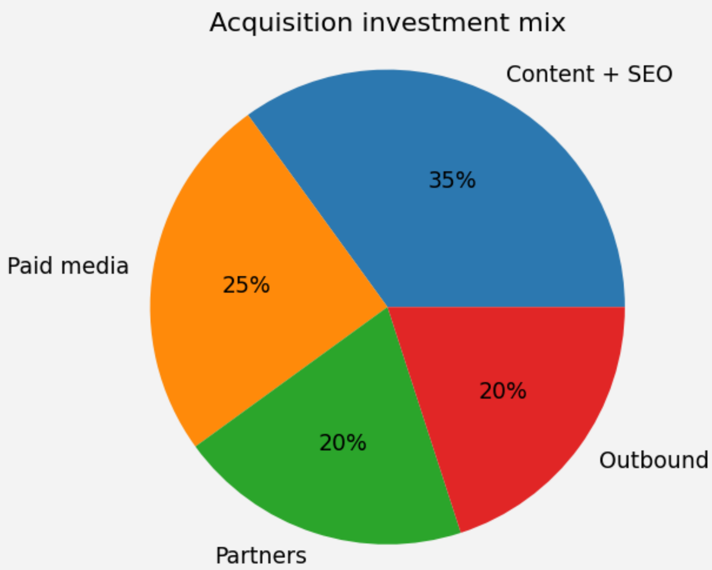
Channel	**Role in GTM**	**When to prioritize**	**Main risk**
Content + SEO	Capture existing demand	Searchable pain and consultative cycle	Slow initial ramp
Paid Search	Test acceleration	Explicit intent and a strong landing page	Inflated CAC from generic keywords
Outbound SDR	Selective prospecting	Sharp ICP and a ticket that supports effort	Low conversion without specific messaging
Partnerships	Leveraged distribution	Complementary ecosystem with trust already established	Dependence on too few partners

4. A 90-day roadmap to get GTM out of PowerPoint

GTM execution requires rhythm. The goal of the first 90 days is not to do everything, but to reduce uncertainty quickly: validate the message, prove a channel, test pricing, shorten onboarding, and record learnings that can become process.

Window	Focus	Deliverables
Days 1-30	Market clarity	Define the primary ICP, refine the value proposition, create the main landing page, build the sales pitch, objection matrix, and initial dashboard.
Days 31-60	Controlled channel tests	Run search campaigns, start outbound for micro-segments, publish bottom-of-funnel content, and close the first partnerships.
Days 61-90	Selective scale	Increase investment only in channels with acceptable payback, institutionalize weekly learning rituals, and optimize onboarding.



Initial allocation example: distribute acquisition investment across channels with distinct jobs. The goal is not artificial balance; it is comparable learning with budget discipline.

5. Artur Amaràl Vision: the logic that separates real launches from corporate theater

Many teams call GTM something that is only task volume. Strong GTM is not measured by the number of assets published, but by the quality of the economic decisions made before scale.

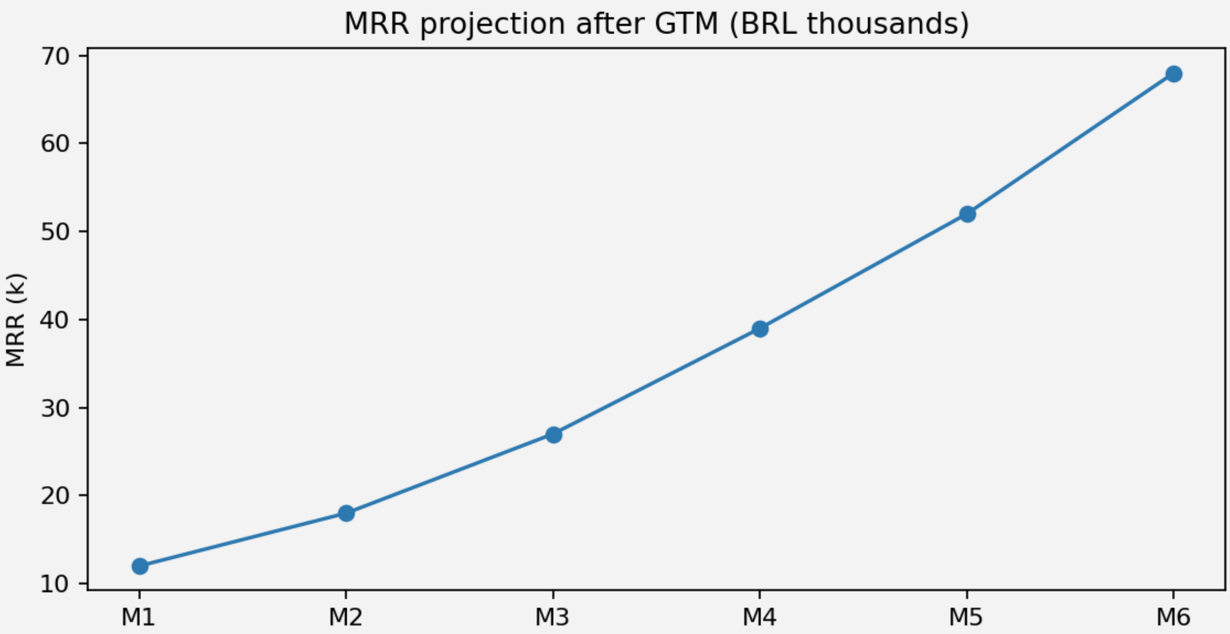
1. Brutal choice
Narrowing the target market increases precision. Serious growth is born from focus, not from dispersion.
2. Pain-first messaging, not feature-first messaging
Buyers do not pay for a feature list; they pay for reduced risk, saved time, or lower waste.
3. Funnel as a system
Marketing, sales, and onboarding must operate with the same narrative, the same ICP, and the same qualification criteria.
4. Efficiency before vanity
Traffic, impressions, and followers without payback and retention are socially attractive numbers and financially weak ones.
5. Proof before scale
Only scale what has already shown conversion, acceptable unit economics, and consistent early retention.

Minimum GTM metrics dashboard

Layer	Metric	Why it matters
Acquisition	CAC by channel	Prevents the company from scaling a channel that looks good but destroys margin.
Conversion	Lead -> meeting / proposal -> close	Shows whether message and commercial process are working.
Revenue	Payback / new MRR / ASP	Connects growth to economic sustainability.
Activation	Time-to-value / week-1 usage	Reduces early churn and accelerates future expansion.
Retention	30-90 day churn	Reveals whether the GTM promise matches the delivered reality.

6. Expected results when GTM becomes disciplined execution

In this document's fictional scenario, the impact of GTM does not show up only in new logos. It shows up in the combination: higher conversion, lower CAC, faster activation, and stronger early retention. That makes growth more predictable.



The projected curve above assumes selective scale on top of a funnel that is already adjusted. Healthy growth is not a media-driven spike; it is a ramp sustained by aligned message, channel, offer, and onboarding.

Final insight: excellent GTM is not launch and hope. It is building a mechanism where product, marketing, sales, and customer success push the same thesis into the market. When that coherence exists, revenue stops being an accident.
